Notes

Teak: Solid Teak comes from certified plantations located in Burma. It is an extremely resistant material, thanks to the presence of an oleo-resinous component that guarantees excellent durability. We also remind that Teak is a living material that reacts to external factors. Prolonged and continuous exposure to them changes the surface layer, up to oxidation which gives it a silvery-grey tone. Moreover, it can show small alterations in color and size. Teak may therefore present not homogeneous shades of color, to be considered as a quality and not a defect. For the maintenance of Teak kindly follow the instructions included in the maintenance kit supplied with the product.

Especially after rain or during period of high humidity, it is recommended to periodically separate the different elements and / or to temporarily lift the seat / backrest / armrest cushions to allow a complete drying of the same and to avoid the accumulation of dirt and humidity that might cause mildew. A protective cover is also recommended to preserve the product in summer and winter, to be used only on the completely dry product. This cover is water vapour repellent and prevents mould and corrosion. It can be washed with water and soap. Do not keep the fabric folded for a long time when it is wet.

To ensure durability over time, it is advisable to place the product on terraces or verandas.
